Meta — Instagram & Facebook

55% of budget · AED 82/day per ad at full tier · the volume engine

This is the only platform that can produce enough conversions inside eight weeks for the algorithm to genuinely learn, and the only one that leaves you a retargeting pool and a lookalike seed worth having. If budget is tight, run this folder alone.

Where to build it

Ads Manager → **Campaigns** → Create → **Leads** → Manual leads campaign. (Ad platform UIs move; the objective name is what to look for, not the exact click path.)

Choose **website conversions**, not an Instant Form. An Instant Form is two taps and no site visit, which produces cheaper leads who have no memory of you by the time you call. The whole offer depends on them landing on the page and reading the promise.

Campaign level

SETTING	VALUE
Objective	Leads
Budget	Campaign budget optimisation (CBO), AED 150/day at floor tier
Schedule	Run continuously; day-parting comes later, not at launch
Attribution	7-day click, 1-day view

Ad set level

SETTING	VALUE
Conversion event	**Landing page views for the first 10 days**, then switch to Lead
Location	United Arab Emirates. Dubai + Abu Dhabi only if under AED 200/day
Age	28–60
Gender	All
Detailed targeting	**None.** Leave it empty
Advantage+ audience	On
Placements	Advantage+ placements (automatic)

Why no interest targeting. Stacking interests on a small UAE audience produces a small group all seeing one mediocre ad. The algorithm now finds the buyer better than a filter does, and the audience knowledge

belongs in the copy instead — which is why the identity word ("clinic", "fit-out") sits in the headline. The headline is both a reader trigger and a targeting signal.

Why start on landing page views. Meta wants roughly 50 conversions per ad set per week to optimise properly. At floor budget you will produce about 12 leads a week — a quarter of that. Ten days on a cheaper, more frequent event gives the pixel something to learn from before you ask it to find buyers. Starting on the lead event with too little volume is the most common way a small budget returns nothing.

The ads

Both go in **one ad set**, so they compete on equal footing.

Ad 1 — The Hand Count · `ad-01-the-hand-count.png`

1080×1350. A notes-app screenshot of the audit as it was actually kept — 62 clinics, each tagged by what its booking button does, with the tally pencilled at the bottom. No logo on the image, no brand colour, no gradient. That is the concept, not an oversight: it reads as something a person photographed off their own screen, because that is what it is.

Areas are shown instead of clinic names. You are about to sell to these businesses, and naming them in an ad that criticises their booking flow is not how that conversation starts well.

Primary text

```
I spent an afternoon opening the websites of 62 Dubai clinics that were running Instagram ads that week.

Not to sell them anything. I wanted to see what happens after someone clicks.

35 have a "Book Now" button that opens a form. Several with a free-text date field — which means a person retypes every request by hand.

18 have no booking mechanism at all. The button is a phone number.

8 have a real calendar. Not one of those eight sits inside anything that sends a reminder or chases a no-show.

One didn't load at all, while its ads were still running.

I'll do the same for your clinic, free, and send you what I find within 24 hours. You keep the notes whether or not we ever speak again.

— Kyntlo
```

Headline (40 char) — `I checked 62 Dubai clinics by hand` **Description** (30 char) — `Free booking audit` **Call to action** — Learn more

Ad 2 — 62 Clinics · `ad-02-62-clinics.png`

1080×1350. The evidential half. Every number here is already measured, so this one ships today with no tokens to fill.

Primary text

```
We checked 62 UAE clinics that advertise on Instagram. Here is what we found.

35 have a "Book Now" button that opens a form — often with a free-text date field. Somebody on the team retypes every request by hand.

18 have no booking mechanism at all. The button is a phone number.

43 have a WhatsApp button. None of those conversations are recorded, assigned or followed up.

Only 8 have a real calendar. None of those sit inside anything that sends a reminder or chases a no-show.

If your ads are running this week, one of those five lines is about your clinic. We will tell you which one, free, in 24 hours.

Kyntlo — booking, reminders and recall in one place.
```

Headline — `35 of 62 clinics. Same broken button.` **Description** — `Free booking audit` **Call to action** — Learn more

Ad 3 — the carousel · `carousel-frame-01..06.png` — *retargeting only*

Do not run this cold. From **week 2**, once the pixel pool passes ~1,000 people, build a separate ad set:

- Custom audience: website visitors, 30 days, excluding converters
- Budget: AED 30/day
- Frequency cap: 6

Six frames in order. Its leads will look artificially cheap because the audience is warm — judge it against other retargeting, never against cold.

Primary text

```
We checked 62 UAE clinics that advertise on Instagram — every one of them paying for leads right now.

35 have a "Book Now" button that opens a form. 18 have no booking mechanism at all. 43 run their real funnel through a WhatsApp button that records nothing.

Only 8 have a working calendar, and none of those sits inside a system that sends a reminder or chases a no-show.

Swipe for the full breakdown, including how to check your own in about two minutes.
```

Reels · `reel-*.mp4` — *optional, week 3+*

The two TikTok videos work unchanged as Reels. Add them as a separate ad set with Reels and Stories placements only, once the feed ads have a winner. Do not run them in the same ad set as the statics — the formats compete badly.

The ABM warm-up — the cheapest line here

One extra ad set, roughly AED 16/day, running all eight weeks:

- Custom audience: upload the 47 interior-design records and 62 clinic records
- Creative: Ad 2 only
- Objective: reach, not leads

Its job is not to generate a click. It is to make sure that when your cold email arrives, the name is already familiar. **Judge it by outbound reply rate, never by its own cost per lead** — and record the pre-campaign baseline now, or the line is unjudgeable later.

Week one — what good looks like

METRIC	EXPECTED BAND
CPM	$10–15
CTR (link)	0.6–1.3%
Cost per lead	$20–40
Qualified rate	40% (Ad 1) · 55% (Ad 2)

Change nothing for the first 14 days. No pausing, no editing, no budget moves. This is the hardest rule to follow and the one that costs most when broken.

When to kill

TRIGGER	ACTION
Spent < 3× target CPL	**Wait.** Judging at 2× carries a 13% chance of killing a winner
≥ 3× target CPL, zero leads	Kill the concept, not the copy. Do not iterate a dead angle
Leads but zero qualified	Swap the angle, keep the format
Qualified rate under 40%	Swap. At 40%, true cost per qualified lead is 2.5× the dashboard figure
Frequency 3.0–3.5	Start two iterations now — they take ~14 days to be ready
Frequency > 3.5, or CTR down 30% from peak	Retire the concept

Graduate to scaling when all five are true: ≥5 qualified leads · ≥60% qualified · at or under target CPL · running ≥14 days · ≥1 qualified in the last 7 days. Then +20% every 3–5 days, never more.

Mistakes specific to this platform

- **Interest stacking.** Tempting, and it will make your audience worse.
- **Judging too early.** See the wait rule above.
- **Editing a winner.** Resets learning. Duplicate instead.
- **Running statics and video in one ad set.** They compete badly; the algorithm will starve one.
- **Health claims.** Ad 2 targets clinics. Keep every claim about buttons and calendars, never about patients, treatments or outcomes. Meta restricts health-adjacent personalisation and the UAE regulates health advertising (DHA, DoH Abu Dhabi, MOHAP).

Before this ad can run at all

Five things are missing site-side and no ad on any platform works without the first two:

1. **Conversion tracking.** This platform's pixel, plus GA4. Without it the campaign optimises on clicks, which is the metric least connected to money.
2. **The landing page.** `/leak-test` — one field (website URL + email), wired to the CRM. The ads all point here.
3. **Ad account + domain verification.** Meta's domain verification is the longest-lead item of the whole launch; start it first.
4. **Currency decided.** The site prices in USD, the internal docs in EUR, the strategy in AED. Pick AED for this market and make ads, page and checkout agree.
5. **Fulfilment staffed.** The offer is a free report inside 24 working hours. This campaign sells speed of response to people you have just taught to measure speed of response. If nobody is assigned to produce the reports, run a smaller budget rather than a slower promise.

Two rules that apply everywhere

Never edit a running ad that is performing. Editing resets the learning phase and throws away everything the algorithm knows. Launch the new version alongside it and let the old one die. Pausing is free; editing is not.

Never sum conversions across platforms. Meta's 7-day window and LinkedIn's 30-day window measure different things and both will claim the same lead. Report side by side and reconcile against the CRM monthly. When they disagree, the CRM wins.

Kyntlo creative batch 2026-10. Performance bands are expected ranges for UAE targeting, not commitments — recalibrate against your own first thirty days.
